

5     **GROUND SUPPORTED MOTORIZED SICKLE BAR MOWER FOR USE ON SLOPING  
TERRAIN**

**VII.   ABSTRACT OF DISCLOSURE**

10           A motorized mower provides an elongate frame journaling  
two elongately spaced co-planar wheels for ground support and  
supporting a rearwardly and upwardly extending handle for  
manipulation. The frame carries a powering structure having a  
motor carried on a depending powering column carried for  
15 adjustable vertical positioning by the frame and communicating  
with a lowermost transmission structure. The transmission  
structure carries a reciprocating double-sided sickle extending  
laterally from the frame for adjustable pivotal positioning in  
a laterally extending vertical plane. The frame is of  
20 releasable compound nature to allow folding of the handle and  
sickle bar for compaction during periods of non-use.
